TO MAKE PHONE **CHANGE SUNDAY**

New Headquarters Nears Completion-- A Model Plant

The completion of the new Houghton exchange of the Michigan State Telephone company, will take place Sunwhen the cut-over from the ob plant in the Gazette building on Isle Becale street to the new headquarters Masonic temple will be made. For the the past few months the new xchange has been one of the busined in Housings and a crew or men from the Western Electric company has been completing the finishing on hos during the past few days.

Manager Relf of the Houghton branch of the telephone company stated yesterday that he is not certain at what hour the our-over will be movie and this will not be determined until the last minute. It is expected that the cut-over will require but a mile be fact it only means publing out two strings and placing in two Owing to the limited space in it is unlikely that the general public admitted and as Manager Reif stated today, "there is really nothing to see when the cut-over is made '

The officials of the telephone com pany plan to have a public day of isiting may and this date will be a nonneed later. At this time, the publ will be invited to visit the new head and inspect the plant, but Manager Reif amounces that this day cannot be set until everything is clean of up and in readiness for visitors.

new exchange takes up a large of two floors of the Masoni building and the equipment is of so varied a character that only an export could properly describe it. The mechanical part of a telephone exchange is little understood by any br those connected with this line of work and is rather difficult to understand even when an expert attempts to tell or the intricate matters concerned.

Manager Reif yesterday gave the following explanation and it is given here as nearly as possible the way in which he explained It:

The motive power of a telephone exchange is electricity and he a general thing, it is provided by the com mercial electric company in each city but the company must be prepared for emergencies. The ordinary electrical tor generator, the motor run by the city lighting plans and operating the guorage batteries, from which latte the current for the elephone opera tions is obtained.

'In the event of an accident to th lighting plant, the telephone compani has an auxiliary generator run by gas motor. These alternative supplies torovide the transmission current. Another generator provides correst for ringing the belie of the telephones. The fearures of the exchange

The aver-mound, the nears of the exchange, through which the relephon calls are handled, is another interestone and intricate decise. It is suffiearly at one time making the posellide working force of sixty. Thus board is Robert H. Shieble. located in a big form at the rear of Baron Altenders of Poland-Irving ?
